ANTEUS CONSTRUCTORA

Anteus Constructora is a construction and civil engineering company capable of providing all service and functions required to carry out construction, adaptation or remodeling projects under the best terms of efficiency and cost.

Since 1996, our experience and skills enable us to perform directly most of our work, although we can subcontract specific jobs in certain cases based on our efforts to search for the most convenient and cost-effective formula for each project.

As a company, we handle Turnkey Projects for any type of construction (housing, commercial or industrial). This allows us a greater optimization in the execution times as well as in the quality of work.

LANDMARK.

Delfinario. Cabo San Lucas, B.C.S.

Corporate Andares. Zapopan, Jalisco.

SUPPORT SERVICES

BIM

Developing the project through this methodology helps to prevent problems between specialties during the different stages of the project: preconstruction, construction and even postconstruction, making the processes more efficient.

PROCORE

For the planning and management of each project, we rely on the use of this platform, optimizing time and work execution.

PLANNING

Creation and implementation of project leading and management strategies, based on objectives, looking for the most efficient and cost-effective formulas. Turnkey project management, which allows us to better optimize execution times as well as quality of work.

SCHEDULING

Calculation, preparation, and graphic representation of execution times; Establishment of dates from the beginning to the end of the activities that make up the processes.

QUALITY CONTROL

Supervisiing that materials and execution meet the construction requirements regarding resistance and appearance.

SAFETY

We establish the policies and procedures to guarantee the safety of the construction personnel and subcontractors.

SUPPORT SERVICES

BUDGETING AND PURCHASING

Quotation of different projects in order to assess the best option based on cost and executio time.

Also, an analysis of unit prices and construction estimates is performed during the construction process considering the inflationay indexes.

CONTROL AND WORK REPORTS

We submit the means to determine concordance between real and planned costs, scheduling, and achievement of the established goals. We link time and costs in order to execute work based on its established schedule.

SAFETY

We establish the policies and procedures to guarantee the safety of the construction personnel and subcontractors.

SUBCONTRACTOR SUPERVISION

The work plan includes a group of specialists in charge of subcontractor management and construction management.

ADQUISITION AND SHIPMENT OF EQUIPMENT

We supply special equipment and systems for electrical and mechanical work.

We provide engineering consultancy searching for the appropiate for their requirement.

CHECK UP STARTING

We made a strict specifications control of work established in the original plan of construction, doing the verification of the operations of alla the systems under our responsability.

POST - TENSIONING

Post-tensioning is a method of prestressing in which prestressing steel is tensioned after concrete has hardened.

Pre-stress is the placement of a concrete element in a state of compression prior to the application of loads; The stress developed by the pre-stress can be pretensioning or post-tensioning.

Prestressed concrete is structural concrete in which internal stresses have been introduced to reduce potential tensile stresses in concrete resulting from loads which are counteracted to a desired degree; in reinforced concrete the prestress is commonly introduced by tensioning the tendons.

Its versatility allows a wide variety of uses in construction: office buildings, housing, shopping centers, industrial floors.

This method produces more slender structural elements, less reinforcing steel, lighter elements with greater load capacity, more clear or spaces between the support elements.

INDUSTRIAL FACILITIES

COMMERCIAL BUILDINGS

MANUFACTURING INDUSTRIES

METALLIC STRUCTURE

The strategic vision in the construction industry has resulted in the fact that proved construction systems and competitive companies that offer quality services and products are the common requirement of customers like yourself.

We are cognizant of the fact that the return on your capital investments in real estate property to perform your productive activities, such as industrial warehouse, inbond facilities or shopping centers goes hand-in-hand with the construction times and with fast response to your requirements.
In these sense, it is clear that working closely with the companies which are at your service and the sum of their strenghts makes the process of building these spaces profitable and productive.

At ANTEUS CONSTRUCTORA we are commited with you to achieve this objective. For this reason, we offer all our products and services, our capacity and technology to guarantee the sucess of your very important investments.

Américas Mil500. Guadalajara, Jalisco.

PREFABRICATED WALLS

HIGH FIRE RESISTANCE

With the simple manufacturing process and without special coating, our walls can withstand up to 2 hours of direct exposure to fire without undergoing any damage, thus protecting the owner's investment and reducing the annual insurance premium.

REDUCTION IN CONSTRUCTION TIME

Since we can prefabricate all of the elements simultaneously with the excavation, soil movement, and foundation work, the construction schedule can be reduced up to 40% compared to other systems.

LOWER COST

Through mass production, all of these qualities result in very competitive costs that are even lower costs than those obtained with similar systems.

Using prestressed walls (tilt-up) in your project for facades, offers great versatility, since the structure and the finish are contained in the same element.

TILT UP WALLS

The Tilt-up walls are extruded concrete elements of f'c = 250 Kg/cm², manufactured in our plant or at site; the prestressed is induced through strand cables which are placed vertically.

APPLICATIONS

Preslabs can be used as a roof and as a slab supported by any kind of structure (concrete, steel, bearing wall, etc.)

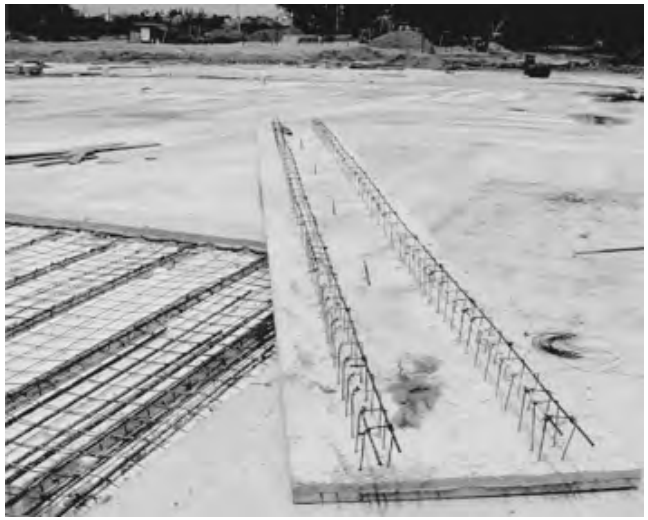

CIVIL WORKS PARKING LOTS HOTELS HOSPITALS
INDUSTRIAL FACILITIES SCHOOLS & COLLEGES
TUNNELS GENERAL CONSTRUCTION

PRESLABS

Is a system which consists in a prestressed concrete that slab fabrication outside the construction site wiht a bigger load capacity and covering larger spaces.
Tha slab fabrication is completely automated and made over steel surfaces.
The concrete has a resistance of
4,267 or 4,978 or 5,689 psi

Tendoms (have different sizes depending on calculations) are high strength stabilized without curvature.
They have uniform stress-strain characteristics.
Preslabs have smooth underside, prepared for painting.
Standard widths are, **3.94**ft (1.2 m) and 7.87ft (2.4m).
Lenght is variable.
Shoring needed every 7.22ft for a preslab of 2.36 in 12.47ft for a preslab of 4 in and 16.4ft for a preslab of 5.9 in.

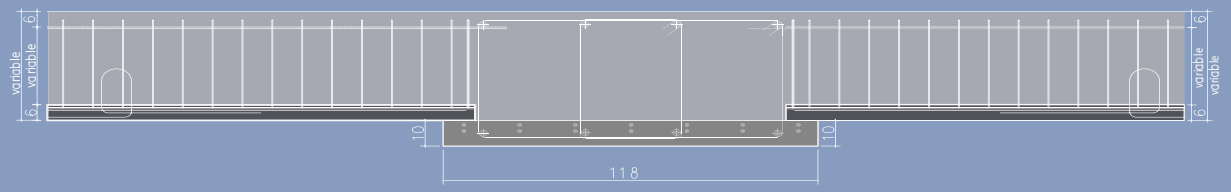

PRESLAB BEAM

Is a system with a bigger loader capacity and less depth than a normal girder. System that has the same advantages of preslab.

Detail of union by preslab-beam

MACHINERY

(HABILITADOS AND CUTTERS)

BAR WISER 28 It is a highly powerful straightening and bending machine with two bending heads designed for processing rebar, with a processing capacity of up to Ø 28 mm, or double Ø 20 mm, or triple Ø 12 mm.

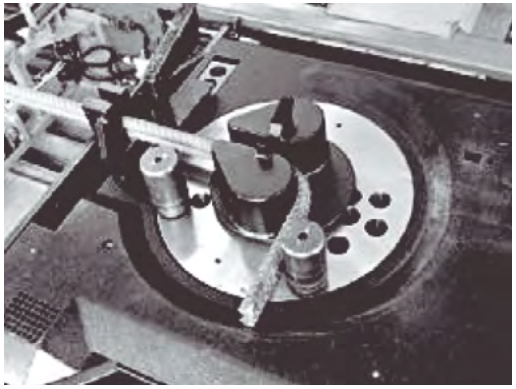

MINI SYNTAX 16 HS It is used for the production of brackets, large-dimension profiles, and bars cut to size using one or two angle irons.

COIL 16 It allows to produce straight cut, straight cut with one or two squares, stirrup, staple, saddles.

CHV-160 CUTTING MACHINE AND P-60 BENDING MACHINE The company has a CHV-160 cutting machine for the cutting process, which cuts the material to the programmed dimensions, as well as a manual P-60 bending machine used to shape steel for beams and columns.

Other services provided by **ANTEUS CONSTRUCTORA** include: lifting equipment, concrete pumps, and excavators.

DESCRIPTION:

These are the projects where our work as a general contractor offers an advantage to our clients by dealing with one company directly, as we_ are in charge of all activities.

Here are some examples of outstanding works:

-legacy tower.
-Opera (in progress).
-Chapultepec 427 (in progress).
-Nauka lot 3 & 32 (in progress).
-Torre del Prado.
-Distrito Cube.

OPERA

Concrete structure.
35 Tower levels: 321,630.80 ft².
8 Basement levels: 194,007.53 ft².
Height: 423.65 ft.
Location: Zapopan, Jalisco.

CHAPULTEPEC 427

Concrete structure.
33 Tower levels: 332,276.41 ft².
5 Basement levels: 167,950.58 ft².
Height: 386.48 ft.
Location: Guadalajara, Jalisco.
Project: TEN Arquitectos.

CORPORATE OFFICES

Concrete structure.
2 Levels: 22,401.67 ft².
Location: Zapopan, Jalisco.

NAUKA LOT 32

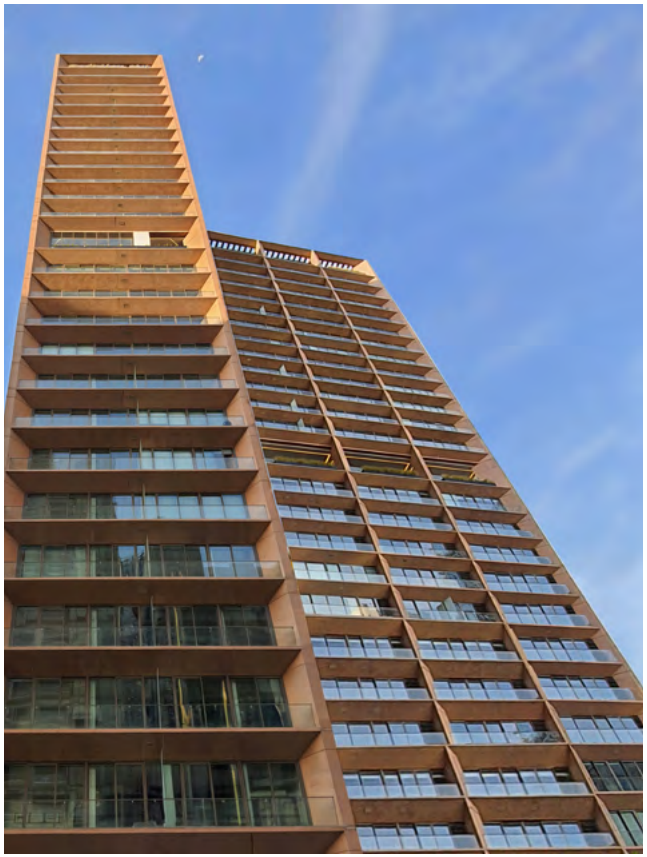

Concrete structure.
2 Levels y 1 basement: 15,986.23 ft².
Height: 27.55 ft.
Location: Nayarit, Mexico.

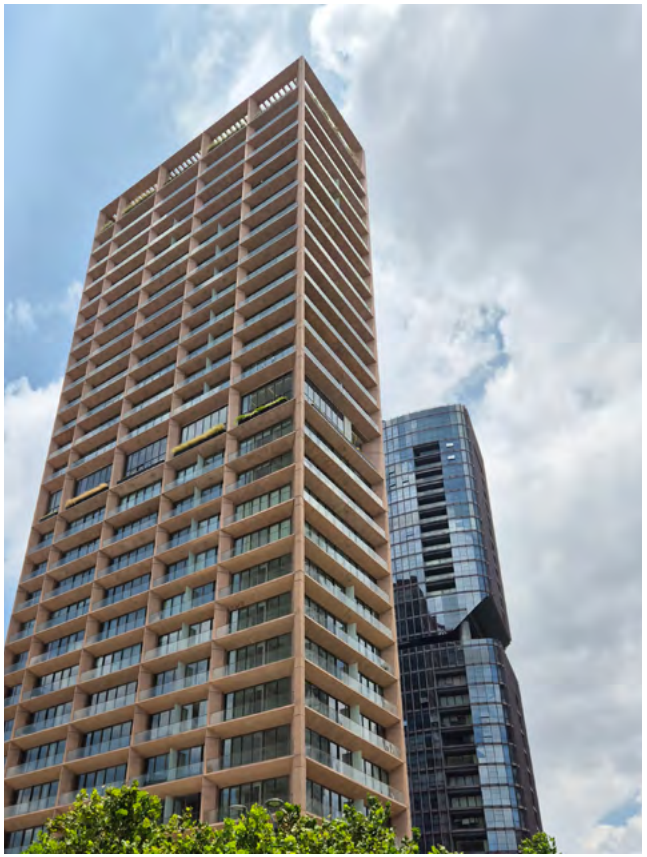

NAUKA LOT 33

Concrete structure.
2 Levels & 1 basement:: 20,729.24 ft².
Height: 32.15 ft.
Location: Nayarit, México.

TURNKEY PROJECTS

LEGACY TOWER

Exposed concrete.
27 Tower levels: 455,119.66 ft².
6 Basement levels: 252,004.67 ft².
Height: 416.83 ft.
Location: Zapopan, Jalisco.
Project: SMA.

PUERTA LAS LOMAS

Concrete structure. & finishes.
